Subject: RE: 10057458 - shortening of VSYNC blanking period for aux data

since Hobbs discloses "one approach" as involving frame dropping, then other approaches are inherently involve keeping all frames. that alone should hang the applicant, so don't let a secondary reference get in your way or let the applicant use it to discredit Hobbs alone.

Victor,

I would like your opinion regarding the applicant's latest 1-page argument regarding this an old application I'd spoken to you repeatedly: 10057458. I left you a voicemail also.

Thank you,  
Warner
